

Almost Everything **FROZEN** on Earth is **MELTING!**

We need to reduce carbon emissions 80% by 2050

To do so, the next 10 years are critical. Reductions must be quick & deep to avoid runaway polar melting, 40' sea level rise, lethal storms & destruction of our societies.

To Save our planet Congress must shift all fossil fuel & nuclear subsidies over the next 10 years to energy conservation, solar, wind & mass transit.

Tell Congress: Let's cut carbon emissions 80% by 2050
